#-************************ Impressive Impalas ************************-#

#-************************ Question-1 ************************-#
#-How has the tornado occurrence varied over the last 10 years?
#Variable under consideration: Count of the tornadoes each year

#Importing the ggplot2 library
library(ggplot2)

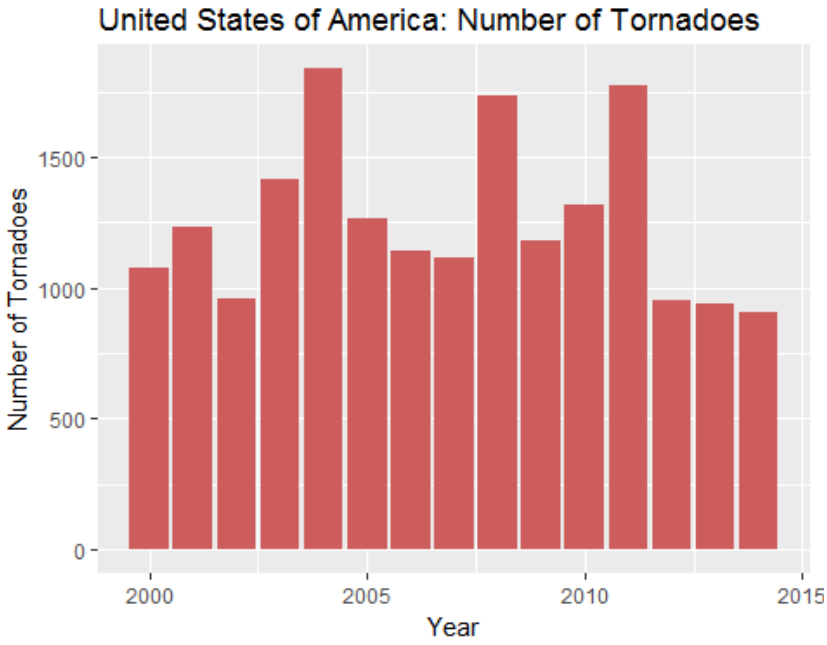
## Warning: package 'ggplot2' was built under R version 3.3.2

#-Read the csv file by manually browsing through the file structure
#-Read he state-wise data for tornadoes and exports in d
#-Read he region-wise data for tornadoes and exports in x
d=read.csv("C:\\Users\\kavas\\Desktop\\Documents\\Courses\\600_AW\\Project\\R
plot\\Tor_Exp_StateWise_RPlot.csv")
x=read.csv("C:\\Users\\kavas\\Desktop\\Documents\\Courses\\600_AW\\Project\\R
plot\\Tor_Exp_RegionWise_RPlot.csv")

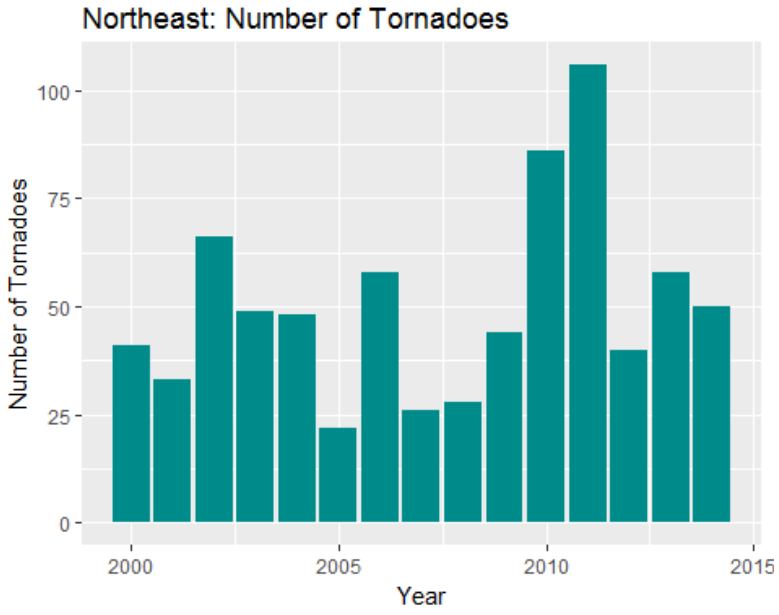
#-We divide the data set using the subset command to analyze
#--different geographic regions in the United States
#--namely Midwest, Northeast, Southeast and West
d.MW=subset(d,d$Region=="Mid-West")
d.NE=subset(d,d$Region=="North-East")
d.SE=subset(d,d$Region=="South-East")
d.W=subset(d,d$Region=="Western")

x.MW=subset(x,x$Region=="Mid-West")
x.NE=subset(x,x$Region=="North-East")
x.SE=subset(x,x$Region=="South-East")
x.W=subset(x,x$Region=="Western")

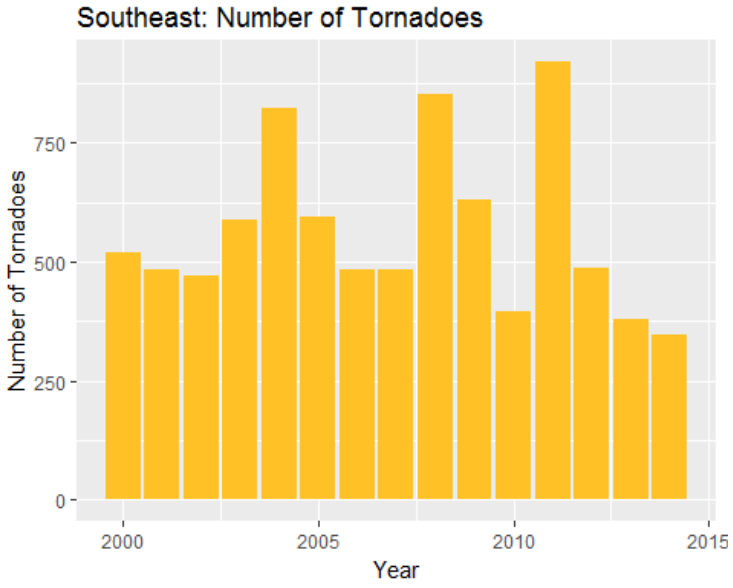
#Plot for the number of tornadoes in United-States
ggplot(d,aes(x=d$Year,y=d$Count))+
  geom_bar(stat="identity", fill="indianred")+
  xlab("Year")+ylab("Number of Tornadoes")+
  ggtitle("United States of America: Number of Tornadoes")
```



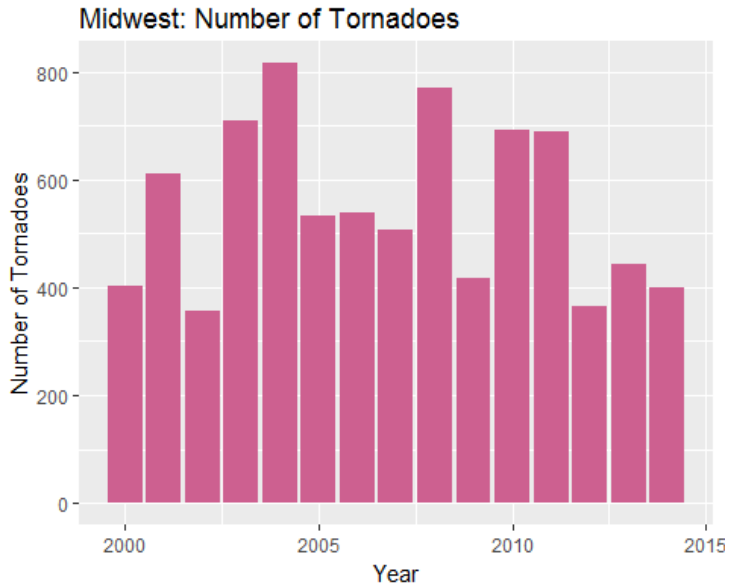
```r
#Plot for the number of tornadoes in North-East
ggplot(d.NE,aes(x=d.NE$Year,y=d.NE$Count))+
  geom_bar(stat="identity", fill="darkcyan")+
  xlab("Year")+ylab("Number of Tornadoes")+
  ggtitle("Northeast: Number of Tornadoes")
```



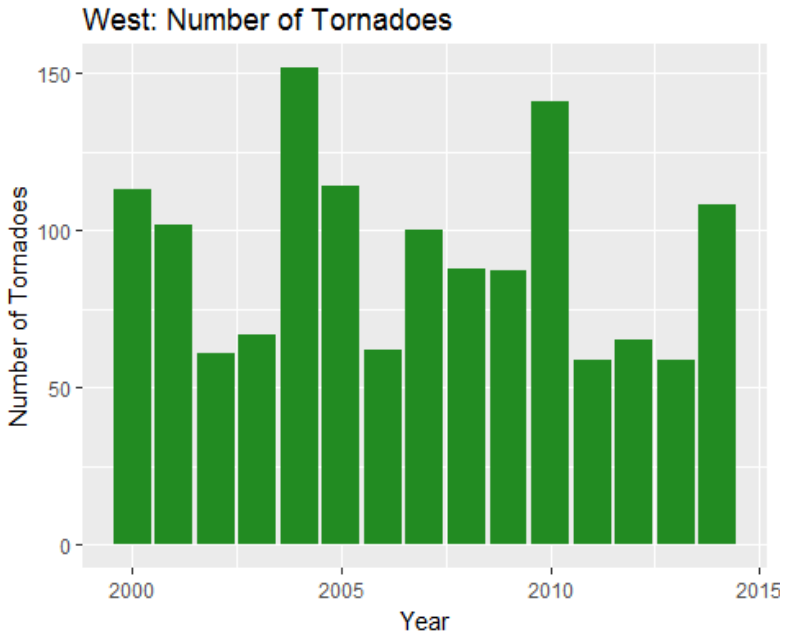
```r
#Plot for the number of tornadoes in South-East
ggplot(d.SE,aes(x=d.SE$Year,y=d.SE$Count))+
  geom_bar(stat="identity", fill="goldenrod1")+
  xlab("Year")+ylab("Number of Tornadoes")+
  ggtitle("Southeast: Number of Tornadoes")
```



```
#Plot for the number of tornadoes in Mid-West
ggplot(d.MW,aes(x=d.MW$Year,y=d.MW$Count))+
  geom_bar(stat="identity", fill="hotpink3")+
  xlab("Year")+ylab("Number of Tornadoes")+
  ggtitle("Midwest: Number of Tornadoes")
```



```
#Plot for the number of tornadoes in West
ggplot(d.W,aes(x=d.W$Year,y=d.W$Count))+
  geom_bar(stat="identity", fill="forestgreen")+
  xlab("Year")+ylab("Number of Tornadoes")+
  ggtitle("West: Number of Tornadoes")
```



```
#-************************ Question-2 ************************-#
#-What is the relationship between tornado occurrences and Exports
#-Variable under consideration:
#-Dependent Variable: Total exports from a state/region
#-Independent Variable: Average F-scale value, Count of tornadoes

#Analyzing the data using linear regression model for each region
